

A21A A22A Mast Arm

Aluminum Pole and Mounting

Project: _____ Location: _____

Customer: _____

Order Number: _____ Qty: _____ Type: _____

Product Number: _____

The **A21A** and **A22A Mast Arm** mounting arms are assembled directly on the tapered pole. The mountings and the poles are conceived and produced to fit together as a unit for individual projects. This ensures that the assembly performs perfectly.

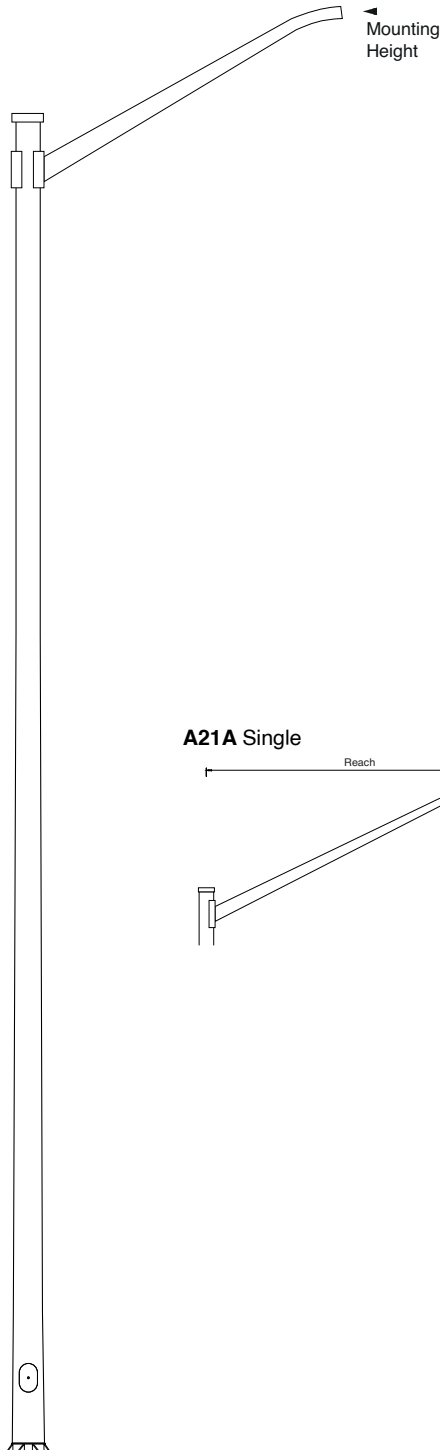

ALU MC3 provides complete solutions based on your project details, drawings, reach, height and needs.

Mounting: The **A21A** and **A22A** Mast Arm mounting arms are made from 6063 aluminum alloy elements welded together. The assembly is heat treated to produce a T6 temper.

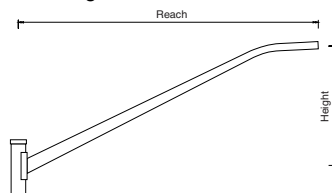

Pole Details: The technical details of the pole and the mounting vary depending on the height and reach required. These details influence the pole's characteristics: base diameter, wall thickness, types of anchor bolts and bolt circle.

Certification: All poles are designed to American Association of State Highway & Transportation Officials (AASHTO) standards. The poles meet applicable ASTM standards. All welders are American Welding Society (AWS) certified.

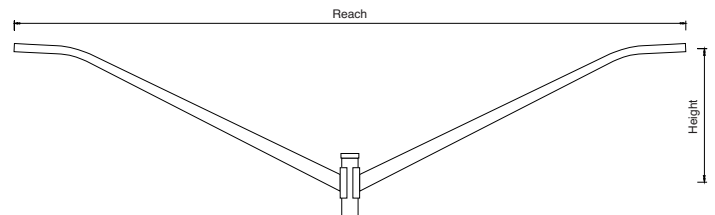

Finish: The standard finish for the pole and mounting assembly and components is natural brushed, or a polyester powder coating applied in accordance with ALU MC3's specifications. Additional colors are available on special order (RAL number required).

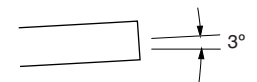

A21A Single

A22A Double
